

OUR WATER FILTERS FOR YOUR WELLBEING

WATER FILTER FOR COUNTERTOP AND UNDER SINK INSTALLATION

REDUCES:	HU-ST	HU-K	HU-N	HU-A	FC-100
Microorganisms (bacteria, fungi, viruses)	x	x	x	xx	x
Turbidity	x	x	x	xx	x
Taste	x	x	x	xx	x
Odour	x	x	x	xx	x
Chlorine	x	x	x	xx	x
Organic contaminants, pesticide, herbicide	x	x	x	xx	x
Heavy metals	x	x	x	xx	x
Water hardness		x			
Nitrate			x		

x = for regular amount of pollutants
xx = for large amount of pollutants

WATER FILTER, COUNTERTOP HU-LINE

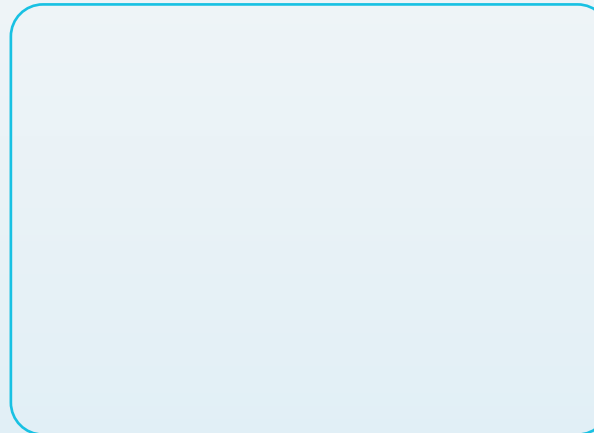

WATER FILTER, UNDER SINK MASTERLINE FC-100

FILOPUR WATER FILTER

- ✓ Reduces bad taste and odour
- ✓ Reduces bacteriological impurities
- ✓ Reduces heavy metals such as lead, mercury or zinc
- ✓ Reduces turbidity

WHY FILTERING TAP WATER?

CHLORINE IN THE WATER

To kill bacteria and germs, the water supply works add chlorine into the tap water. Chlorine may lead to damages of your health and significantly affects the taste and odour of the water.

TOXIC HEAVY METALSTOXIC HEAVY METALS

Heavy metals in the drinking water are stored in the cells of our body and are the root of many chronic diseases. For example the nervous system can be attacked or the cell activities might be disturbed.

BACTERIOLOGICAL CONTAMINATION

Unwanted bacteria (e.g. E.coli) in the drinking water may lead to sickness. These bacteria may get through polluted ground water into the water cycle. The warm water pipes in the buildings are good places for bacterial growth especially if the water stays for a longer time.

INTENSE AGRICULTURE

In areas with high agricultural activities the usage of fertilizer, herbicides and pesticides is common. These substances may get into the water cycle and compromise its quality.

THE LAST METERS MATTER

The tap water is treated by the water supply works and safely stored in the reservoir. Afterwards, the water flows many kilometres through the community piping system and finally through the pipes of your building. Some of these pipes might be old or poorly maintained. During this long journey, different contaminants may get into the water.

DRUG RESIDUES IN WATER

Many people take medication regularly. These substances are released through the metabolism and end up in the water cycle. The impact of these drug residues in the water on human beings hardly explored yet.

FILTERED TAP WATER - POSITIVE EFFECTS ON YOUR WELLBEING

FILTERED TAP WATER FOR YOUR WELLBEING

Water plays an important role in our body and is a means of transportation for nutrients as well as for degradation products of the metabolism. Say “yes” for high water quality and don’t compromise on your tap water.

GOOD WATER - EVERYBODY LIKES IT!

- The Filopur water filter keeps the important natural minerals and salts in the water.
- Increase your **taste adventure** while drinking tea, coffee, mixed drinks or pure water: filtered water just tastes better.
- **Safety:** Take care of the health of your family.

THERE ARE MORE ADVANTAGES OF FILTERED WATER!

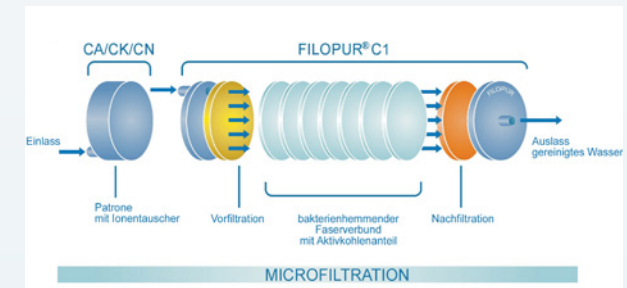

- ✓ **PROTECT THE ENVIRONMENT :**
No long transports, no waste.
- ✓ **SAVE MONEY :**
Filtered water is up to 25-times cheaper than bottled water.
- ✓ **ENJOY THE COMFORT :**
No carrying of heavy bottles, no space needed, no descaling of your home appliances.

FILOPUR - 40 YEARS OF EXPERIENCE IN WATER FILTRATION

OUR TECHNOLOGIES :

**MICROFILTRATION,
ACTIVATED CARBON AND ION EXCHANGE**

The three-step microfiltration with integrated activated carbon reliably purifies the tap water and removes bacteria and other contaminants down to 0.4 microns. The activated carbon removes pesticide, herbicide, heavy metals as well as bad taste and odour.

Besides the standard water filter Filopur also offers filter units with ion-exchange resin to reduce water hardness or nitrate.

POINT-OF-USE INSTALLATION

The Filopur HU water filter is directly installed at the tap and only filters the water which is used for drinking or cooking. This is highly efficient and saves money.

YOUR ADDITIONAL ADVANTAGES

- Beautiful and compact design
- Easy installation and filter change
- Certified by the Swiss Gas and Water Industry Association
